DEEPWAVE

A study of deeply propagating gravity waves from the Earth's surface to the mesosphere

May 29, 2014 to July 27, 2014

Project Location: Christchurch, New Zealand; South Island, New Zealand; and surrounding Southern Ocean

What's New?:

[Preliminary Agenda: DEEPWAVE Science Team Meeting, 4-6 May 2015](#)

[DEEPWAVE EOL/PI/NSF Campaign Debriefing, 7 November 2014](#)

[Presentations Now Available](#)

[Boulder DEEPWAVE Workshop, 23-24 October 2014](#)

[Presentations Now Available](#)

Project Description:

DEEPWAVE (Deep Propagating Gravity Wave Experiment over New Zealand) studied the dynamics of gravity waves (GWs) from the surface of the Earth to the mesosphere and lower thermosphere (MLT). The project examined how tropospheric winds and storms modulate the generation of GWs, how GWs propagate across the tropopause into the stratosphere, and how the Polar Night Jet and tidal winds influence GW propagation and breakdown in the middle atmosphere. Important observational components of DEEPWAVE included in situ measurement from the [NSF/NCAR HIAPER Gulfstream-V](#) research aircraft along with surface, airborne and satellite-based remote sensing. EOL also deployed an Integrated Sounding System (ISS) with a radar wind profiler and other ground instrumentation on the West Coast of New Zealand.

Scientific Objectives

- Detailed measurement of deeply propagating GWs over several density scale heights using in situ and airborne remote sensing
- Determine the relationship between GWs in the Upper Troposphere and Lower Stratosphere (UTLS) and GWs in the Mesosphere and Lower Thermosphere (MLT).
- Implementation of new airborne remote sensing lidars and a mesospheric temperature mapper (MTM) to extend GW measurements into the MLT.
- Comparison of airborne observations of GWs with satellite observations
- Assessment of GW variations with altitude, including filtering and interactions throughout the stratosphere and mesosphere, and the implications for vortex-edge drag and MLT forcing.
- Development and testing of numerical models of GW generation and deep propagation over several density scale heights.
- Fundamental predictability studies of GWs and their secondary effects, which will guide our improvements in GW prediction and parameterizations in applications for numerical weather prediction, climate, and general circulation modeling communities.

DEEPWAVE DATA MANAGEMENT MILESTONES

| Event | Deadline |
|--|---------------------------------------|
| End of Field Campaign | 28 July 2014 |
| Preliminary Data Submission | 29 January 2015 |
| Final Data Submission | 29 July 2015 |
| Initial Data Analysis Period (DEEPWAVE Science Team members have exclusive access to the data during this period.) | 29 January 2015 to 29 January 2016 |
| Data becomes Public Domain | 1 February 2016 |

DEEPWAVE Data Policy and Data Submission Instructions

FTP: ftp.eol.ucar.edu

Login: anonymous

(No password required.)

cd pub/data/incoming/deepwave

(NOTE: This command should be done all in one step.)

It is very important to **send an e-mail to [sfw at ucar.edu](mailto:sfw@ucar.edu) indicating that the data file(s) have been FTPed**

1. All investigators participating in DEEPWAVE agree to promptly submit their preliminary processed data and metadata to the main DEEPWAVE Data Archive Center at EOL no later than 29 January 2015 (six months after the end of the field campaign) to facilitate initial instrument inter-comparisons, quality control checks and calibrations, as well as early interpretation of the combined data set. Individual preliminary datasets can be restricted (password protected) at the discretion of the data provider. All archived supporting operational data and products will be open and accessible by the Scientific Community during this period. **The preliminary data submission period is from 29 July 2014 to 29 January 2015.**
2. DEEPWAVE Investigators agree to **submit their final research data and metadata to the EOL within the one-year period** following the conclusion of the field campaign. **The final data submission period is from 29 July 2014 to 29 July 2015.**
3. During the initial data analysis period, defined as a one-year period following the preliminary data submission deadline to the DEEPWAVE archive, DEEPWAVE Principal Investigators (PIs) will have exclusive access to these research data. This initial analysis period is designed to provide an opportunity to quality control the combined data set as well as to provide the PIs, their students and collaborators ample time to analyze and publish their results. **The initial data analysis period is from 29 January 2015 to 29 January 2016.**
4. **All data and metadata in the archive will be considered open to the public domain 18 months following the end of the field campaign** (i.e., on 1 February 2016 and thereafter). However, any research dataset within the DEEPWAVE archive can be opened to the public domain earlier at the discretion of the responsible data provider in consultation with the DEEPWAVE SSC.
5. **A list of DEEPWAVE Investigators will be provided by the project science leadership to EOL** and will include the PIs directly participating in the field experiment as well as collaborating scientists and agencies who have provided guidance and data in the planning and analysis of DEEPWAVE data. All DEEPWAVE investigators will have equal access to all data. All data shall be promptly provided to other DEEPWAVE investigators on the above specified list upon request. However, **the DEEPWAVE science leadership will be responsible for approving any data requests from investigators not included on the list.**
6. **During the initial data analysis period, the responsible data provider must be notified first of the intent to use their data**, in particular if data are to be provided to a third party (e.g., journal articles, presentations, research proposals, other investigators). It is strongly encouraged that the responsible data provider(s) be invited to become collaborators and/or co-authors on any projects, publications and presentations. If the contribution of the data product is significant to the publication, the PIs responsible for generating a measurement or a data product should be offered the right of co-authorship. Any use of the data should include an acknowledgment or preferably a citation (e.g. Digital Object Identifiers or DOIs). **The EOL expects to be assigning DOIs for all final datasets submitted to the main archive at EOL.** In all circumstances, the responsible data provider(s) should be acknowledged appropriately.
7. All acknowledgments of DEEPWAVE data and resources should identify: (1) DEEPWAVE; (2) The providers who collected the particular datasets being used in the study; (3) The relevant funding agencies associated with the collection of the data being studied, and (4) the role of EOL or relevant data archive center, and (5) use of any relevant DOIs.
8. The EOL will be responsible for the long-term data stewardship of the DEEPWAVE archive.

Status

The DEEPWAVE Field Campaign took place between 5/24 - 7/27/2014 in and around the New Zealand. The base of operations was located at the USARP base, Christchurch Airport. The NSF/NCAR-GV and the DLR Falcon were the research aircraft involved. Major ground-based research facilities were located at Hokitika, Lauder and Haast as well as in Tasmania near Hobart.

For a summary of these operations and related products, please click on the "**Missions**" link above.

DEEPWAVE ARCHIVE DATA DOCUMENTATION

Data Set Documentation ("Readme") Guidelines

The documentation (i.e., the "Readme" file) that accompanies each project data set is as important as the data itself. This information permits collaborators and other analysts to understand any limitations or special characteristics of the data that may impact its use. Data set documentation should accompany all data set submissions, including both preliminary and final. The following outline and content is recommended and should be adhered to as closely as possible to make the documentation consistent across all data sets.

Data set Documentation/Readme Outline:

Title: This should match the data set name

Author(s):

Name(s) of PI and all co-PIs
Complete mailing address, telephone/facsimile numbers,
E-mail address of PIs, and web address (if applicable)
Similar contact information for data questions (if different than above)

1.0 Data Set Overview:

Introduction or abstract
Time period covered by the data
Physical location (including lat/lon/elev) of the measurement or platform
Data source if applicable (e.g., for operational data include agency)
Any web address references (i.e., additional documentation such as Project web site)

2.0 Instrument Description:

Brief text (i.e., 1-2 paragraphs) describing the instrument with references
Figures (or links), if applicable
Table of specifications (i.e., accuracy, precision, frequency, resolution, etc.)

3.0 Data Collection and Processing:

Description of data collection
Description of derived parameters and processing techniques used
Description of quality assurance and control procedures
Data intercomparisons, if applicable

4.0 Data Format:

Data file structure and file naming conventions (e.g., column delimited ASCII, NetCDF, GIF, JPEG, etc.)
Data format and layout (i.e., description of header/data records, sample records)
List of parameters with units, sampling intervals, frequency, range
Data version number and date
Description of flags, codes used in the data, and definitions (i.e., good, questionable, missing, estimated, etc.)

5.0 Data Remarks:

PI's assessment of the data (i.e., disclaimers, instrument problems, quality issues, etc.)
Missing data periods
Software compatibility (i.e., list of existing software to view/manipulate the data)

6.0 References:

List of documents cited in this data set description. Please provide links for on-line publications, if available.
